Roll-A-Shade is approved to provide Reusable Shade Panels to screen a closed Play Area from Customer view. When a Play Area is reopened for Customer use, these panels can be easily removed and stored in the provided shipping tube for future application. The panels are hung on the *INSIDE* of the play area utilizing Command Strips to minimize damage to drywall. These can remain in place between uses for quicker re-installation. *If you have any questions, please contact Roll-A-Shade at [CFA@rollashade.com](mailto:CFA@rollashade.com), or use "click to submit" link above. Please attach pictures when submitting.*

### General Notes:

- Measurements should be taken for Play Area door and all Play Area windows that face the interior of the restaurant (including vestibule and dining spaces). Number of interior windows vary from prototype to prototype.
- Note that your window sizes may vary. Each span of glass should be measured from *INSIDE* the Play Area, measuring the overall width and length per the instructions below.
- If the window is connected to the Play Area door, stop measurement prior to door frame. The door panels will need to be measured separately.

**THIS SOLUTION IS NOT FOR USE ON EXTERIOR GLASS.**
