MANUFACTURING CAPABILITIES

Roll-A-Shade® utilizes the latest technology in roller shade manufacturing. Expertly written manufacturing software ensures that all shade systems are manufactured to your exact specifications. By implementing a strict quality control program, each shade is checked for quality during multiple stages of the production process.

MOTORIZATION

AT YOUR FINGERTIPS

Motorization provides a convenient and efficient method for managing roller shades without the need for manual operation. This technology offers remote control and automation options, enhancing convenience and ease of use.

WE OFFER A VARIETY OF CONTROL OPTIONS

- Hand-held remotes
- Wireless wall switches
- Wind sensors
- Sun sensors
- Integration for Third-party automation systems
- Compatibility with Google Home and Alexa Control

GOING GREEN

Roll-A-Shade® is committed to protecting our environment. We pride ourselves on being an environmentally responsible company, from our products to our practices. Roll-A-Shade® prides itself in bringing our customers the most innovative and environmentally friendly products available in the market. Our diverse Eco-Screen fabric library includes PVC-Free fabrics and fabrics manufactured using post-industrial plastic waste helping our customers reduce energy costs and carbon footprint.

ECLIPSE

AUTOMATED SUN CONTROL

The Eclipse is a sun sensor with real-time sun exposure detection that raises and lowers shades automatically. This ensures employees do not need to constantly raise and lower shades throughout the day. The Eclipse is also equipped with a weekday and weekend timer that can be programmed to operating hours.

The Eclipse has a solar recharge panel that eliminates the need to change batteries and enables wireless installation.

KEY FEATURES

- Real-time light detection
- Autonomous & wire-free
- Solar powered
- Flexible scheduling

PLUS⁺ SHADE

The Plus⁺ Shade is a premium grade commercial system that provides sun control. This versatile shade system provides flexibility with operation options. You can choose from manual, motorized, or automated controls based on your preferences and needs. It can be controlled with our Eclipse Sun Sensor or other automation products.

The Plus⁺ Shade delivers a modern, polished look constructed from extruded aluminum, durable brackets, and mounting hardware. It is designed to be the most versatile system in our line.

KEY FEATURES

- Designed to last long term
- Secure installation process
- Multiple fascia & bracket options
- Large size ranges
- Dual shade filtering

INFINITY SHADE

The Infinity Shade system is a sleek and modern commercial system that has been designed to minimize light gaps, provide sun protection, and increase comfort. The polished Infinity bracket features a smooth, flush finish that perfectly conceals the clutch mechanism.

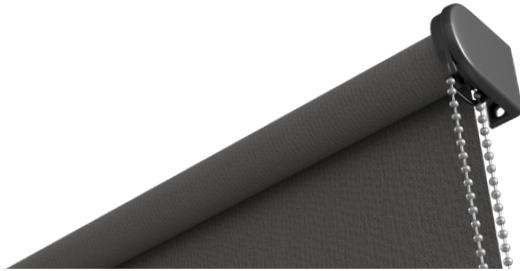

The Infinity Shade can be manual, motorized, or automated using our Eclipse Sun Sensor. This shade system is available in two sizes and can be mounted inside and outside.

KEY FEATURES

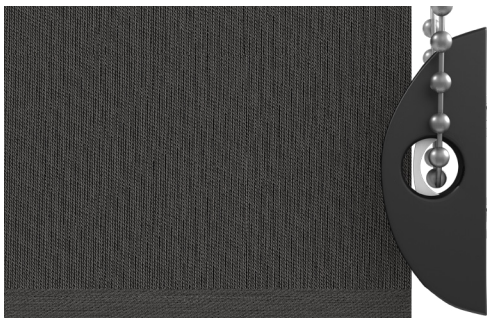

- Designed to provide sun and heat protection
- Improved comfort
- Easy to operate
- Fully automated option available

ZIPSHADE

The ZipShade is a heavy-duty exterior shade system that allows you to expand the functionality of your outdoor space. ZipShade combines durability, protection, and high performance. The ZipShade is equipped with the industry's most advanced zipper tracks, allowing it to withstand extreme winds of up to 80mph.* This durable exterior shade system provides sun protection and glare control for occupants in outdoor areas while offering the perfect amount of view through.

The ZipShade has benefits that include lowered utility bills and additional patio seating. Installing the ZipShade system creates a comfortable atmosphere, and its patented technology guarantees fixed fabric with no wrinkles.

The Solar ZipShade is an innovative exterior shade system that utilizes solar power to autonomously control the screen. It contains a solar cell on the front of the head box that provides energy for its operations.

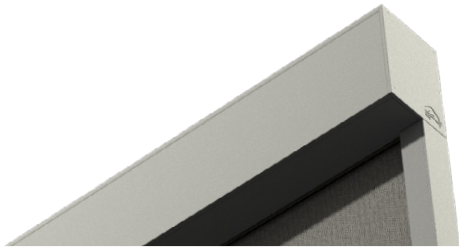

KEY FEATURES

- Withstand extreme winds
- Fixed fabric with no wrinkles
- Lowered utility bills

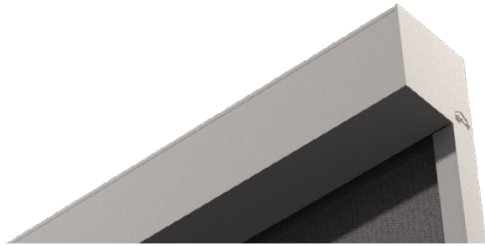

SOLAR ZIPSHADE KEY FEATURES

- Charged by the sun
- Compact and easy to install
- No wiring is required to be run to the motor for power

CABLE GUIDE

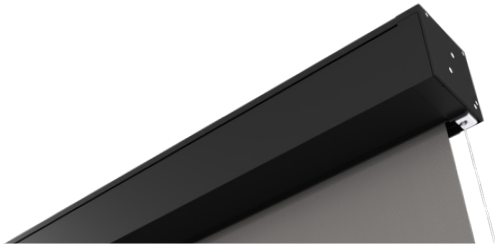

The Cable Guide system is cost-effective and provides proper shading in outdoor patio spaces. The Cable Guide system is a robust system that will block up to 95% of UV rays. This exterior system allows for a stabilized function while providing sun control in outdoor spaces.

KEY FEATURES

- Stainless steel and corrosion-resistant materials for outdoor use
- Simple and quick to adjust wire tensioning
- Compression springs that allow for wire stretch
- Compatible with manual or motorized control systems

CONTRACT PLUS⁺ SHADE

The Contract Plus⁺ Shade is a heavy-duty interior system designed to meet the performance requirements of the most demanding architectural-grade applications. It is the product of choice for project scopes that exceed the size and control limitations of the Plus⁺ Shade.

The Contract Plus⁺ Shade assemblies include single, coupled, and dual with options for open roll, fascia, and pockets.

KEY FEATURES

- High-torque motors with full spectrum of wired and wireless control options/accessories
- Building management system integration capabilities
- Robust bracketry and hardware components
- Pockets available in 5"x5", 6"x6" and 7"x9" with optional drop ceiling accommodation

CUSTOM PRINTING

Custom printed window shades are a fantastic way to enhance branding while still maintaining the benefits of shade functionality. They offer a unique opportunity to personalize your space and showcase your brand's identity. Printed shades are visible from the storefront, putting your company logo or products directly in front of your customers. Roll-A-Shade® offers custom printing on manual, stationary, and motorized roller shades.

Our state-of-the-art printing equipment prints vibrant, vivid artwork. Our durable, odorless, water-based latex inks are GREENGUARD Gold certified and able to withstand years of wear. With a wide selection of solar screen or blackout fabrics to print on, your options are endless.

CHOOSING THE RIGHT FABRIC

Choosing the right fabric is pivotal for maximizing overall comfort. Our sun control fabrics are designed to control light, glare, and heat without obstructing view.

Before selecting a fabric, it's important to identify your main sun issues. The most common issues are glare, heat gain, and view through. Identifying these concerns will aid in narrowing your fabric selections.

DARK FABRICS

Dark fabrics are great for view-through and minimizing glare. Dark-colored fabrics transmit less light, which in turn has a lower surface brightness and reflectivity. Dark fabrics are the right option if preserving outdoor views is essential.

LIGHT FABRICS

Light-colored fabrics will reflect sunlight, absorbing less heat and lowering the heat gain of a space. Light fabrics are the perfect option for a room with intense UV rays and harsh sunlight.

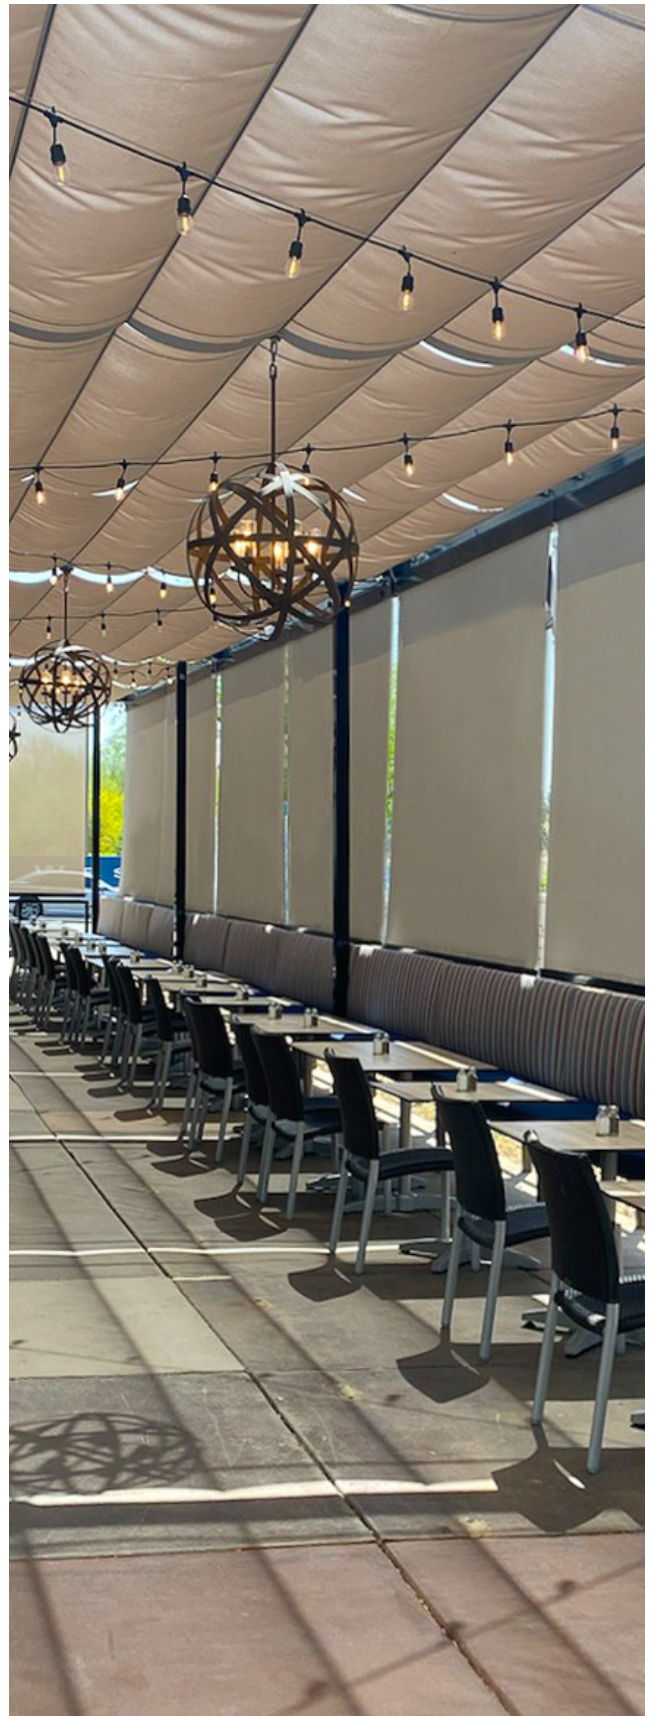

DUPLEX FABRICS

Duplex fabrics are an ideal solution when both heat gain and glare are issues. The light color faces outside to reflect sunlight and reduce heat gain. The dark color faces the interior and preserves view through while also reducing glare. The duplex fabric option utilizes the benefits of both light and dark colors creating the perfect sun control solution.

NATIONAL BRANDS

Roll-A-Shade® provides consistent brand management throughout North America. Consistency between locations, both corporate and franchise, is of the utmost importance. Simply specify your shade system, fabrics and colors and we will custom fabricate each and every shade to your exact specifications. Our in-house Facilities Department is integrated with third-party procurement solutions and facility management platforms. All Roll-A-Shade® products are installed by fully trained and insured professionals.
